INTRODUCTION: There are many solutions available on the market that falls in the general category of “pool cover”, but the first thing you should do, is ask yourself what do you expect from your swimming pool cover? If you only want to prevent evaporation of your water, our solution is probably not for you, as there are many cheaper products on the market. However, should SAFETY, aesthetics, lower maintenance costs, etc. be important to you as well, then we have the solution you are looking for!

Here are just a few reasons why you should consider our pool covers:

FEATURE	BENEFIT
1. 550micron PVC	2. a. Extremely durable b. Does not tear easily / at all. c. PVC does not absorb water, which leads to material's integrity being compromised in the long run.
3. Heavy duty Mild Steel ratchets	3. a. Extremely strong and durable b. Virtually impossible for children to disengage c. Optional Stainless Steel available at additional R600.00 per set of three
4. 32mm Galvanised battens ±1m apart	4. a. Eliminates rust stains forming on material around battens. b. The weight lends further stability against strong winds c. Not easy for children to pick up or move d. Very strong and durable
5. Ventilation holes midway between each batten	5. a. Allows water to “breathe” under the cover, reducing risk of discolouring and becoming murky b. Lets in rain water, preventing water going to waste and the formation of puddles.
6. Weight limit of 110kg	6. a. Although the fabric specification claim a weight carry limit of 220kg, we are only prepared to guarantee up to half of that AND we strongly advise that clients should rather prevent children and pets from running onto the covers and children should never be allowed near any swimming pools unless supervised by responsible adults.

All our swimming pool covers are guaranteed for 2 years under normal wear and tear conditions.

Stainless steel ratchet

Before – old cover

After – Ultimate Blinds cover
